

PROCESS AUTOMATION STUDIO

Foster collaboration with a one-stop process automation platform

In today's competitive world, organizations want to collaborate to manage complex business processes. But legacy systems make collaboration between different stakeholders difficult. A unified platform can radically change this by offering deep visibility to all business processes in a single place.

Process Automation Studio helps you manage unstructured and complex business processes by creating a visual representation of business cases. It investigates the business case to resolve a problem, claim, or request. Equipped with an AI-enabled workflow editor, it also allows quick resolution of issues, transparently and effectively.

FEATURES

Manage Complex Workflows

Create and manage unstructured complex workflows, audit trails, and data cataloging.

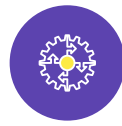

Knowledge Management

Enable setup of enterprise knowledge management hubs with automated resolution workflows.

Single View Interface

Get a single interface for 360-degree views of the solution, enabling efficient team collaboration and effective case resolution.

Microservices-based Workflow Engine

Manage the flow of business by visualizing, operating, and reporting on the process, and achieve a high level of flexibility and agility.

System Administration

Seamlessly manage the health, roles, permissions, and security of process workflows.

BENEFITS

Increased transparency with effective collaboration across organizational boundaries.

Speedy issue resolution through automated workflows.

Strong operational layer with robust case management, workflows, and dashboard capabilities.

Improve accessibility for business users with no coding experience through intuitive drag-and-drop features.

Instant on-demand access to information about cases and issues anytime, anywhere.
